

White, 1695.

A New

ALMANACK

For the year of our Lord God,

1695.

And the year from the Worlds

Creation, 5644.

Being the third from the Bissextile, or Leap-year,

Calculated for the Meridian

of Todington in Bedfordshire, where the Pole Artick is elevated above the Horizon 52 degrees, and 8 minutes; and may serve for all parts of England, without any sensible error.

By Tho. White.

Cæli enarrant gloriam Dei, & opera manuum ejus annunciat firmamentum, Plal. 19. l.

Cum Sybillegio.

L O N D O N.

Printed by H. Clark, for the Company
of Stationers, 1695.

Since

A TABLE to know when the Terms begin and end, and the number of their Returns, with the day of the Month whereon they will be this present year, 1695.

Hilary Term begins the 23 of <i>January</i> , and ends the 12 of <i>February</i> , and hath 4 Returns, <i>Viz.</i>	Octab. Hilary.	Jan. 21.
	Quind. Hilary.	Jan. 28.
	Craft. Purif.	Feb. 4.
	Octab. Purif.	Feb. 9.
Easter Term begins the 19 of <i>April</i> , and ends the 6 of <i>May</i> , and hath 5 Returns, <i>Viz.</i>	Quind. Pasche	April 8.
	Tres Pasche	April 15.
	Mens. Pasche	April 22.
	Quinq. Pasche	April 29.
Trinity Term begins the 24 of <i>May</i> , and ends the 12 of <i>June</i> , and hath 4 Returns, <i>Viz.</i>	Craft. Ascens.	May 3.
	Craft. Trinit.	May 20.
	Octab. Trinit.	May 27.
	Quind. Trinit.	June 3.
Michaelmas Term begins the 23 of <i>October</i> , and ends the 28 of <i>November</i> , and hath 6 Returns, <i>Viz.</i>	Tres Trinit.	June 10.
	Tres Mich.	Octob. 21.
	Mens. Mich.	Octob. 28.
	Craft. Animar.	Nov. 4.
	Craft. Mart.	Nov. 12.
	Octab. Mart.	Nov. 18.
	Quind. Mart.	Nov. 25.

The Characters of the Seven Planets.

♄ Saturn, ♃ Jupiter, ♂ Mars, ☉ Sol, ♀ Venus, ☿ Mer-
cury, ☾ Luna, ☊ Dragons head, ☋ Dragons tail.

The Characters of the five Aspects.

- ♌ Conjunction, in the same Sign and degree.
- * Sextile, when Planets are distant 60 deg. or 2 Signs.
- Quartile, when distant 90 deg. or 3 Signs.
- △ Trine, when they are distant 120 deg. or 4 Signs.
- ♌ Opposition, when distant 180 deg. or 6 Signs.

TABLE to know when the Eclipses this Year, 1695.

THis Year will produce four Eclipses of the Luminaries, viz. two of the Sun, and as many of the Moon, and they thus happen.

The first will be a Lunar defect, on May the 18 day, about our Ten of the Clock in the Morning, and therefore invisible as to us. The Moon will lose her Light in *Sagittary* near her North Node, and the *Scorpion's Heart*.

The second will be a small Eclipse of the Sun, on June the first, about 5 a Clock at night, it happens in 21 degrees of *Gemini*; but scarcely visible as to us.

The third will be an Eclipse of the Moon, on November the 10 day, at our 7 a Clock in the Evening, among the Stars of the *Pleiades*; and, if the Air be clear, more than half the Moons Body may be seen to lose its Light.

The last will be a small Eclipse of the Sun, on November the 26, about 7 a Clock in the Morning, in 15 degrees of the Celestial *Archer*, but will not be perceivable to us, because the Sun will then be under our Horizon.

This Year *Venus* is our *Phosphorus* or Morning-star until the 23 day of *January*; at which time having made her Conjunction with the Sun she becomes our *Hesperus* or Evening-star, until the 6 day of *November*; after which, to the end of the Year she will be Oriental of the Sun, and our bright Morning star again.

ADVERTISEMENT.

BAteman's true Spirit of Scurvy-grass, plain and golden, so long famous for the Cure of the Scurvy, Gout, Dropsy, and several other Chronical Diseases, are still prepared by *John Hooker* and Partner, and sold by them in *Paul's Chain* near *Dockers Commons*, pr. 1 s. each Bottle. Also the Grand Balsamick pill, prepared chiefly for the Distempers of the Head and Stomach. Prepared and sold by *John Hooker*, at his House aforesaid, pr. 1 s. the Box.

January hath XXXI days

New Moon the 5 day, 3 min. past 3 in the morning.

First Quarter the 12 day, at 4 in the morning.

Full Moon the 20 day, 39 min. past 5 in the morning.

Last Quarter the 28 day, 11 min. past 1 in the morning.

TO Measure Timber and Board, the ordinary Way now used amongst Carpenters in the Country, is by the Line of Numbers, commonly called *Gunter's Line*.

Board Measures.

As 12 is to the breadth in Inches: so the length in Feet, to the content in Feet.

Squared Timber 14 Inches on both sides, or any other equal Square.

As 12 Inches is to 14 Inches the breadth or side: so the length in Feet, to a fourth Number; and that fourth Number extended to the content in Feet.

A Square 14 Inches one side, and 9 Inches the other side, or any unequal Squared Timber.

As 12 Inches is to 9 Inches the breadth: so the depth 14 Inches to a fourth Number.

As 12 to this fourth Number, so the length in Feet to the content in Feet.

Round Timber.

As 42.54, (the Circumference in Inches that makes 1 Foot long, a Foot.) Is to the Circumference in Inches. So the length in Feet, to a fourth Number, and that fourth, to the content in Feet being extended.

But the usual way with Carpenters is, to girt about the middle, and take a fourth part thereof for the Square, and then measure it as Squared Timber by the Line. Note, that if the Compasses come off the Line, they must be set at the same point, on the Line at the other end of the Ruler: and always keep them forward the same way, according to the Proposition.

THIS Table shews the Interest of any sum of Money from 1 s. to 100 l. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the peny is divided into 100 parts; so that 25 parts are a farthing, and 50 parts an half-peny, and 75 parts 3 farthings, &c.

Example:

The Interest of 100 l. for six months one week and one day, is found by the Table.

Interest of 100 l. { for 6 mon. 03-0-0-00 } l. s. d. q.
 { for 1 week, 00-2-3-61 } viz. 3-1-7 half-pen
 { for a day 00-0-3-94 }
 03-2-7-55

ATABLE

A TABLE shewing how many Years Purchase a Lease or Annuity to endure for any Term of Years under 33, is worth presently at Interest upon Interest, at Six in the hundred, and shewing plainly how to Discount any Lease in Being, and the true Value of the Reversion, after any Number of Years.

Years of a Lease.				The Use and Explanation of this TABLE.				Years of a Lease.			
Years.	Months.	dec. par.						Years.	Months.	dec. par.	
1	0	11	0	The first Column towards the left hand, sheweth the Years of a Lease or Annuity, and right against each Year, is the Years, Months, and Decimal Parts of a Month's Purchase, that such a Lease or Annuity is worth;				17	10	5	8
2	1	9	9					18	10	9	9
3	2	8	1					19	11	1	3
4	3	5	9					20	11	5	7
5	4	2	5					21	11	9	3
6	4	11	0	EXAMPLE. Suppose a Lease or Annuity to continue ten Years, and you would know how many Years Purchase it is worth in present Money, look in the Table for ten Years of a Lease to the left hand, and against the same you shall find 7, 4, 3, which sheweth such a Lease to be worth seven Years, four Months, and three tenth Parts of a Month's Purchase.				22	12	0	5
7	5	7	0					23	12	3	6
8	6	2	5					24	12	6	6
9	6	9	6					25	12	2	4
10	7	4	3					26	13	0	0
11	7	10	7					27	13	2	5
12	8	4	6					28	13	4	9
13	8	10	3					29	13	7	1
14	9	3	6					30	13	9	2
15	9	8	5					31	13	11	1
16	10	1	3					32	14	1	0

Again, Are you take or buy the Reversion of any Lease or Annuity, work thus: Suppose the Lease to be thirty Years in all; you find in the second Table, and right hand against thirty, 13 Years 9 Months, and two tenth parts of a Month's Purchase; this it were worth, were it in present possession. But suppose there be a Lease of five Years (more or less) before yours commence; look in the Table against the five Years, and there you find four Years, two Months, five tenth parts, half a Month's Purchase; take this out of the same against thirty, which is 13, 9, 2; 4, 2, 5; the remainder is nine Years six Months, seven tenth parts of a Month; and so much is the Reversion after five Years worth, the remainder of thirty Years. This is useful and very easie.

A Geographical Epitome of the M A P
of England and Wales; wherein is shewed how
each Shire is bounded and joyned to each other; and
what Point of th. Compass every County lieth from the Ho-
nourable City of London: (being largely published) the
use of which is explained in the following Page.

North:

South:

England is in	{ Length 389 Breadth 279 Compass 1532	miles.	Isle of Man is in	{ Length 18 Breadth 18 Compass 94	miles.
Wales is in	{ Length 303 Breadth 232 Compass 948		Anglesey-Isle is in	{ Length 21 Breadth 18 Compass 89	

A

An Alphabetical Catalogue of all the Shires, Cities, Market-Towns, Castles, Parishes, Rivers, and Parks, in every particular Shire in England and Wales; with the distance of Miles, and Points of the Compass from London.

White,

The Explanation and Use OF THE M A P and T A B L E

First for the Map: The Figures in each Shire of the Map, are to shew you the names of every County, and the Letters in the same are for such uses as I will shew hereunder.

You must understand, that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, and the little black speck or spot therein, signifieth London. Now you would readily finde the name of any Shire therein, and how many miles the middle of the said County (in a straight line) is from London, and what point of the Compass it lies from the said City, resort then to the Table of Shires on the other side, and it will resolve you.

As for Example :

Yorkshire it hath the figures of 39 in the Map, and it hath likewise in the Table; where is shewed that the middle or heart of that Shire is 145 Miles from London in a straight line, and it lieth North from the City and looking forward toward the right hand, it sheweth hath one City, Forty Market Towns, Fourteen Castles, Four hundred fifty nine Parishes, Thirtie six Rivers, and Seventy two Parks; and so of the rest.

The use of the Letters in the Map, is this :

Scotl. signifieth part of Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard point, H Holy-head, the * the Irish-Sea, B the British or English Sea, G the German-Sea, Ba Barwick, D Dover, N Newcastle, C the Points of Compass, S the Scale of Miles by which you may measure the distance of any place: for every black degree is five miles, so is every white.

The 39 Shires from Berkshire to Yorkshire are the English Shires, and the other 13 from Anglesey to Radnorshire are Welsh.

It may be something farther in Miles to the middle of each Shire, by reason of the crookedness of the high hills, and Vallies; but what is here set down is meant in a straight line from London.

White.

To Measure Land by the Chain of ten Links to the Perch.

I Understand that many honest Country-men, could Measure small Closes or pieces of Land, by casting them into Triangles or Squares, if their lengths, breadths, or perpendiculars would happen to be in even Perches, but if they have odd links in them, then they do not understand the way how to cast them up; therefore I will shew them how they shall perform the same.

Suppose there be a Close or piece of Land 35 Perches and 7 Links long, and 24 Perches and 6 Links broad, Multiply 35.7. the length, by 24.6 the breadth, as if they were whole Numbers, with a prick between the Perches and Links, and the product thereof will be 87822, which two last Figures in your product you must cut off, with a dash of your Pen, which are 22 square links towards another Perch, there being in one Perch 100 square links; the 878 in your product are Perches, and if the 878 be divided by 40, the Quotient will be 21, which are Roods, and 38 Perches, which long square doth contain 5 Acres 1 Rood, 38 Perches, and 22 square Links.

Example of the Multiplication.

If your length or breadth to be multiplied, were one of them given in Perches, the other in Perches and Links, then from the product thereof, you must cut off but one Figure, which one Figure will shew, so many tenth parts of one Perch. And if the length or breadth to be multiplied happeneth to have a half Link in either of them, thou mayest remember, that half a Link in breadth, through every twenty Perches in length, maketh one Perch of Land, which thou mayest add to thy product, &c.

$$\begin{array}{r} 35.7 \\ 24.6 \\ \hline 2142 \\ 1428 \\ 714 \\ \hline 87822 \end{array}$$

Although there be several kinds of Triangles, I will therefore add one Example for all which is general, Half the length of the Base being Multiplied by the length of the Perpendicular, shall be equal to the Area of the Triangle.

Or half the length of the Perpendicular being multiplied by the whole Base, will be the content of the Triangle.

If a Close or piece of Land be broader at one end, than at the other, add both the ends together, and take the half thereof for the breadth, which multiplied by the length, the Product sheweth the true Content.

White W

England containeth 29568000 Acres.

Scotland containeth 4414000 Acres.

Ireland containeth 8000000 of Acres.

The 17 Provinces of the Low Countries contain in the whole, 1691000 Acres, whereof those under Spain, 97000 Acres.

Those United under the States, 359000 Acres.

France in its 32 Provinces containeth 82879000 Acres.

The Explanation of the following Table.

First, get a Chain or Cord of two perches in length, and divide each perch into 10 equal parts, which I call links, each of those parts will contain 19 inches, and 8 parts of one inch: the inch divided into 10 parts, 10 of those links makes 16 feet, and an half, our common perch statute measure: 100 square links makes one perch of land, 40 square perches make one rod, 80 half an acre, 120 three rods, and 160 square perches one acre.

This following Table doth contain 5 Columns: The first Column on the left hand sheweth the length of the Acre in perches and half perches; the figure of 5 under every length, signifieth 5 links, or half a perch forward; The other four Columns shew the breadth for one Acre; the first Perches, the second Links, the third Inches, the fourth Parts of one inch, the inch divided into 10 parts.

And also in this last Column in many places of this Table, you will see a small Figure placed on the right hand of p, which is no more than one 10th part of an inch divided into 4 parts; and the true or neereft part I have observed.

Example: At 13 perches in length, the breadth will be found 12 perches, 3 links, 1 inch, and 5 parts of an inch, and 1 part of a fourth; which is a quarter of a tenth part. At 13 perches and an half in length, which is expressed by the figure of 5 under 13, you will finde the breadth 11 perches, 9 links, 10 inches, 2 parts and 3 quarters.

A Table to set forth Acres :

Declaring the breadth for one Acre
for any length given in Perches, or in Half
Perches, from 10 to 80.

Exactly Calculated, by *Thomas White*, Surveyour.
